1	26 (amended). An oscillatory amusement ride, which comprises:
2 \wedge .	a housing having a bore, a closed first end containing an aperture, a second end,
3 HI	and a side;
4	a piston slidably mounted within the bore;
5	a holder for a participant;
6	a cable that exits said housing through the aperture in the closed first end of said
7	housing and re-enters said housing through the second end of said housing, said cable
8	being attached to said piston within said housing; and
9	a means for transferring force between said cable associated with said housing
10	and said holder, wherein said housing is capable of retaining a compressed fluid between
11	the closed first end and the piston for at least one oscillation of the piston.
